ERPFOCUS

E2 MANUFACTURING SYSTEM

EXTENDED PROFILE

OVERVIEW

This software has now been replaced with
[ECi M1 which is available to view and compare](#) on our directory.

Shoptech's E2 Manufacturing System is a platform that aims to integrate all administrative demands experienced by manufacturing workshops.

The E2 Manufacturing System allows the comparison of quotes with competitors and can draw in information about the materials, labor, and overheads. The ERP comes with a built-in calculator, increasing confidence when creating quotations.

The E2 Manufacturing System has a rule-based logic for inventory management and automates reorders. There is also a WebView module that allows for data sharing both within the shop and outside the company, enabling communication directly with vendors and customers.

A mobile app is available for E2 Manufacturing System, allowing users to reduce data entry requirements and increase accuracy with the use of tablets in the workshop, with orders complete and materials required updated in real-time.
